

DATA MANAGEMENT

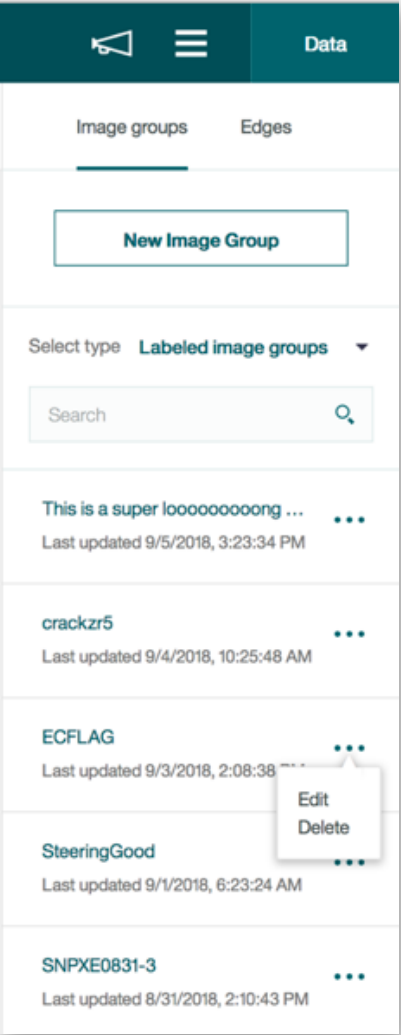

Original

A large amount of data was displayed in a narrow side panel where user could not rapidly find target data.

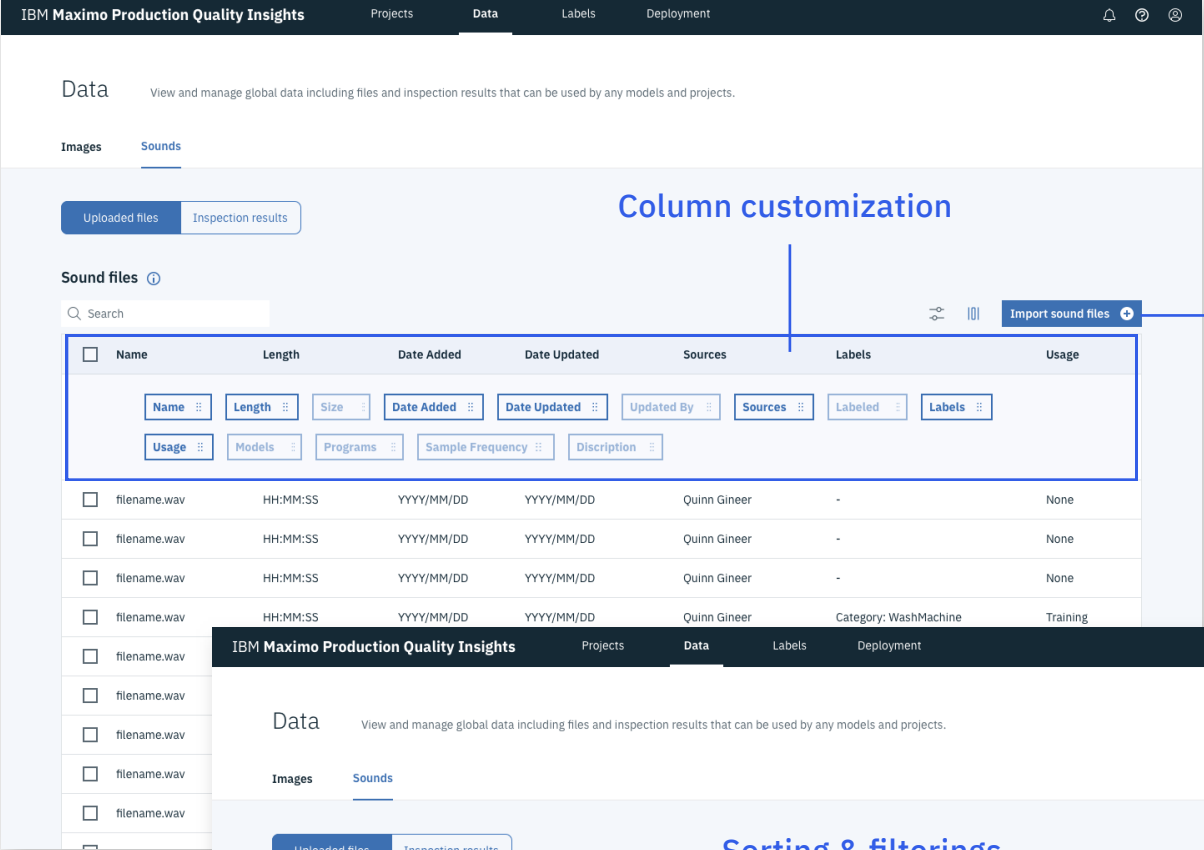

Improvement

- As users have to upload a large amount of data, we proposed to support batch uploading so users don't have wait for each uploads.
- User can customize the columns based on their needs. (display or hide column, adjust the orders)
- Filtering and sorting can help users to find the desired data rapidly.
- Pagination is used to improve the loading speed of large amount of data.
