User Cases & Needs

IT PERSON NEEDS TO

- manage / monitor the solution analytics and the system within the enterprise (what is where, it is working as expected, versions...).

- integrate with external systems.

SO THAT...

they can ensure quality activity is performing in accordance with plant production.

DATA SCENTIST NEEDS TO

- understand the data for building a model.

- contribute the model to the soluton / Quality Engineers and prove model is working as required.

SO THAT...

the model can meet the requirements and the Quality Engineer can confidently leverage it at scale.

MANAGEMENT/BUYER NEEDS TO

- understand the value of the new solution / new technology / new technology for their enterprise.

- consume KPIs to functionally improve the plant quality and prove the improvements.

- communicate value to headquarters.

SO THAT...

they can confidently deliver on commitments and continue to foot the bill.
