**UX Enhancement**

LABELING

Original

- Labels can only be assigned to the whole sound file, which means all sound files have to be pre-processed outside the solution.

Improvement

- Offer a visualized way to manual label, which is more intuitive that meet user expectation and habits. (The whole experience is similar the sound/vedio editing experience that user can understand easily.)
- The same type of labels would occupy one sound track, which imply the connection of each label.

Before:

After:

The same type of label would occupy one sound track.
