UX Enhancement

# SIMPLIFY CREATE MODEL FLOW

Original

- View is too small to take complicated actions. (Popup)
- Too many steps to create model.
- Model parameters are too difficult for LoB users to understand and define.
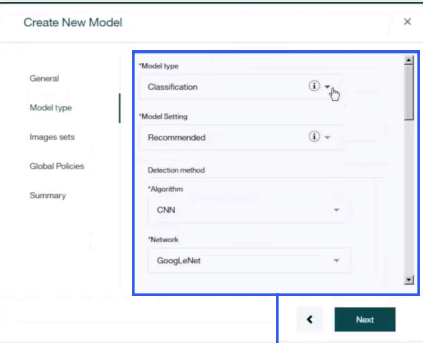

Improvement

- Provide a full page for creating model so user has a large space to select and refine data.
- Only keep the key paths to create model, hide the parameters into custom settings with default value, thus reducing the learning cost and decreasing interferences for end users.
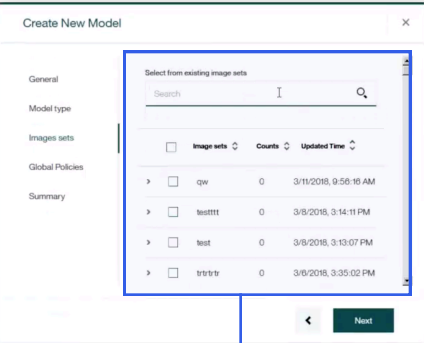

Before: (Popup window)
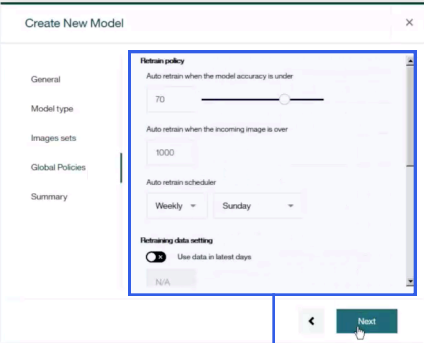

1. General

2. Model parameters

3. Data

4. Retrain policies

5. Summary

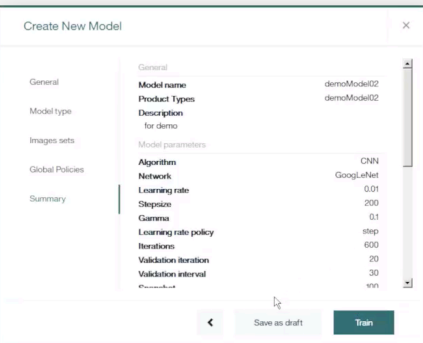

A long list of parameters that requires domain knowledge to understand.

View size is too small to select target data. (Lack of sorting and filtering)

No need to set retrain polices at creating model flow.

After: (Full page)

1. Model details

2. Choose labels

3. Refine files

Hide complicated parameters into custom settings
